

Desktop. Laptop. Pocket: Nokia Nseries leads a new era of personal Internet

Nokia Nseries devices combine the most advanced high-speed mobile computers with location-aware sensors, daring design and multi-purpose form factors to connect people in new ways to the people, places and things that matter most to them.

The millions of people who own a Nokia Nseries device can filter information according to who they are, where they are and what their friends are doing to create a personal Internet experience that's as unique to them as their fingerprint.

Designed for Internet-savvy users, the latest Nseries flagship device - the Nokia N97 - integrates Nokia's latest services including Ovi Store, Nokia Music Store and Ovi Maps with the most advanced technology including a live home screen with fully customized widget support, like a true mobile computer. Fast HSDPA and WLAN browsers boost the speed of inputting via the tilting 3.5" touch display or QWERTY keyboard, putting the user in control and at the heart of the personal Internet.

Access to the Internet, music, games, and even maps for navigation can be fully customized according to a person's location and individual likes and interests; be that easy access to social networks, online videos, local weather updates or RSS feeds from favorite publications.

Live online. 24x7

Advanced technology meets intelligent design in the Nokia Nseries range to consolidate several multi-media functions and features with superior web browsing to give people greater freedom to connect, create, discover and share highly personalized media and applications online wherever they are.

With a more personal Internet experience, the ways people can use Nokia Nseries devices can be as infinite as their imagination and creativity allow. Whether it's publishing favorite work-out routes using A-GPS tracking and Sports Tracker application or watching online video, Nokia Nseries gives users a blank canvas upon which to build their own personal Internet experience. With over 90 million Nokia Nseries devices in the hands of people around the world, there are several specific features and Internet-based services that make this a truly iconic range.

>>>

Open up Your Personal Internet with Ovi Store

The Nokia N97 is the first device to ship with Ovi Store, providing a one-stop-shop for thousands of applications, games, videos, podcasts, web and location-based services. With Ovi Store people can filter their search by their social location or 'SoLo', allowing them to surface applications and services most relevant to where they are located or get smart recommendations based on what their friends are doing. Ovi Store will have premium and free content from a range of global and local content providers and developers, including Facebook, Hi5, Paramount Pictures and Qik.

Life through a Carl Zeiss Tessar lens

With advanced Carl Zeiss lenses built into every Nokia Nseries device, users are able to capture, share, store and print high quality images while on the go. By joining forces with Zeiss, a world leader in mobile imaging, Nokia Nseries users can enjoy sharp, clear images and DVD-quality video clips that can be captured, geotagged and shared instantly on social networking sites like Flickr and Ovi Share or sent via email or MMS. Optimized for both video and still images, the Nokia N86 8MP is the most advanced mobile imaging device in the Nokia Nseries range, featuring wide-angle Carl Zeiss Tessar lens with variable aperture that is powerful enough to capture super sharp photos even in challenging low light or ultra bright conditions.

Mega Memory

Whether you've captured tens of thousands of photos or downloaded hours of music and video content, the Nokia Nseries devices make storing easy as they provide the largest on-board memory capacity in the Nokia range. From the Nokia N97 offering 48GB of memory – 32GB on board and space for a 16GB card – through to the popular Nokia N95 8GB, there's plenty of room to archive precious personal memories and content.

Music on the move

Music has the emotional power to spark conversations and create a desire to share new discoveries. With excellent audio and storage capabilities, Nokia Nseries delivers a music experience that can be either enjoyed privately through the 3.5mm headset or shared with others via FM transmitters. The Nokia Nseries range of mobile computers are compatible with the Nokia Music Store, where people can go to explore the latest charts, discover new artists and rediscover old favorites from millions of tracks.

Mapping the Future

Sharing content doesn't stop at uploading photos and video online. Nokia Maps is about uncovering new places to eat, drink and visit, as well as being able to recommend new finds to friends so places offline – as well as online – can have a more personal touch. From pedestrian and drive navigation to hundreds of local points of interest, intrepid travelers can download thousands of multimedia city guides – including Lonely Planet and Michelin content – perfect for exploring and sharing new places.

Easy Upgrades

The beauty of a Nokia Nseries device is that taking it out of the box is just the beginning. Just like a desktop PC people can constantly improve and refresh their Nokia Nseries with new features, functions and fixes so they can do even more with it.
